LET US INTRODUCE IMAGE API

PulsLogic is most advanced biometric access control in the industry based on real time video analysis, facial and voice recognition, available as Cloud service or on-premise installation.

Face Recognition image API is a part of PulsLogic suite available for everyone.

HTTP Based API calls can quickly and precisely give compare images and provide you with confirmation if person matches or not.

Free account requires no specific approvals and comes with test credits so you may check your integration in real-world scenario prior to a purchase.

As simple as sending a request and receiving response code. This document will help you in getting started.
